Summary:

This chart shows the steps a computer follows to check a number. First, it asks you to type in a number. Then, it looks at the number to see if it's bigger than 100. If it is, the computer says "Greater than 100." If it's not, the computer says "Less than 100." After that, it's done. This helps show how computers make simple choices using numbers.
